**Title of presentation** | The Voice Clinic and Paediatric Voice Disorders  
---|---  
**Date of presentation** | Tuesday, 19th May 1-2pm  
---|---  
**Presenter(s) details** | Kate Osland and Sarah Inglis  
Speech Pathologists, The Children’s Hospital at Westmead  
---|---  
**Target Audience** | Speech Pathologists – Basic level of assumed knowledge  
---|---  
**Introduction/Background to the topic** | This presentation will outline the service delivery model of the Voice Clinic at the Children’s Hospital at Westmead, a joint venture with the University of Sydney. Three cases will be presented, representing a variety of client groups that attend the Voice Clinic. Assessment and management of these clients will be discussed, highlighting special considerations for these population groups. Objectives of the session include:-  
1. To understand the service delivery model offered by the Voice Clinic, and to whom, when and how to refer.  
2. To learn how 3 different types of voice disorders may present, and understand the varied management pathways for children with voice disorders.  
---|---  
**Method/Approaches used:** | Conducted literature review of articles relevant to the presented case studies. Information from this review was used to guide case study discussion.  
---|---  
**Conclusions & Recommendations for practice:** | • The Voice Clinic assessment model provides an alternative to invasive ENT procedures for diagnosing paediatric voice disorders.  
• Children can present with a wide range of underlying vocal pathologies, from organic to functional to psychological in origin.  
• Working with paediatric voice disorders presents a varied array of challenges, and a multidisciplinary approach is often indicated.
